Asexual Reproduction

What do you KNOW?

- I know nothing

What do you Wonder?

- What it is

Science in Context Experts Assignment

Form: Spores

1. Find real examples of your form of asexual reproduction
2. Watch a video (or two)
3. Look up images and draw a picture on your sheet
 - a. add labels/words/arrows/colour
4. Describe the process

When a plant is dying it gives off spores that go into the air and can reproduce the same plant. For example dandelions, when they're about to die, you can blow them and the white stuff that falls off is called spores.

-
5. Define asexual reproduction in less than 10 words

One bacteria joining another creating more bacteria of that specimen.
