

Lab Write-Up Format: Each partner must do own write-up. If it is emailed, please put your name and block into the subject line of the email. ☺

Name: _____

Partner: _____

Block: _____

Title

Purpose: What you are supposed to be learning about/investigating. Usually given at the beginning of the lab instructions.

Procedure: What you did, in enough detail that someone outside class would understand what you did. Draw diagrams in this section, if needed.

Formulae and Information: What you have been given to use – formulae, constant values, etc...

Data: Tables and observations. Include ticker tape, etc – anything that data is recorded on. Tape into lab or take a picture and put into lab electronically.

Data Analysis: Show sample calculations, % error calculations, graphs, ...

Sources of Error: Things like limit of measuring device, reaction time, impurities, etc. Do NOT simply say “human error”!! You need to explain. “I did it wrong” is also NOT acceptable!

Questions: Answer any additional questions from the end of the lab here.

Conclusion: Answer the purpose: state the main points/discoveries – summarized; discuss the meaning of the findings. Do not simply repeat the sources of error – they belong in the Errors section of the lab.
