

Ch 3 Extra Practice

1. Mass : kg or g

$$2a) F_g = mg \\ = 150 \text{ kg} \left(9.81 \frac{\text{N}}{\text{kg}} \right) = 1471.5 \text{ N} \rightarrow \underline{\underline{1.47 \times 10^3 \text{ N}}}$$

$$b) F_{g_{\text{moon}}} = \frac{1}{6} (1471.5 \text{ N}) = 245.25 \text{ N} \rightarrow \underline{\underline{2.45 \times 10^2 \text{ N}}}$$

3. The moon has no atmosphere so both would hit the ground at the same time.

$$4. \frac{1}{r^2} \propto 1440 \text{ N}$$

$$\frac{1}{(4r)^2} \propto \frac{1440 \text{ N}}{4^2} = \underline{\underline{90 \text{ N}}}$$

$$5a) g = \frac{GM}{r^2} = \frac{(6.67 \times 10^{-11} \text{ N} \cdot \text{m}^2 / \text{kg}^2) (7.3 \times 10^{22} \text{ kg})}{(1785000 \text{ m})^2}$$

$$= 1.528 \frac{\text{N}}{\text{kg}} \rightarrow \underline{\underline{1.5 \frac{\text{N}}{\text{kg}}}}$$

$$b) F = mg = 80 \text{ kg} \left(1.5 \frac{\text{N}}{\text{kg}} \right) = 122.24 \text{ N} \rightarrow \underline{\underline{1.2 \times 10^2 \text{ N}}}$$

weight

c) mass = 80 kg (same on Earth as the Moon)

$$6. F = \frac{G M m}{r^2} = \frac{(6.67 \times 10^{-11} \text{ N} \cdot \text{m}^2 / \text{kg}^2) (5.8 \text{ kg}) (5.8 \text{ kg})}{(0.355 \text{ m})^2}$$

$$= \underline{\underline{1.8 \times 10^{-8} \text{ N}}}$$

$$7. \quad 5.5 \times 10^{-71} \text{ N} = \frac{(6.67 \times 10^{-11}) (m)(m)}{(1)^2}$$

$$\sqrt{m^2} = \sqrt{\frac{5.5 \times 10^{-71}}{6.67 \times 10^{-11}}}$$

$$m = \underline{9.1 \times 10^{-31} \text{ kg}}$$

$$8. \quad F = \frac{(6.67 \times 10^{-11}) (2 \times 10^{30} \text{ kg}) (6 \times 10^{23} \text{ kg})}{(6 \times 10^{12})^2}$$

$$= \underline{2 \times 10^{18} \text{ N}}$$

$$9. \quad \begin{array}{l} F_f = 2.5 \text{ N} \\ F_g = F_N = 40 \text{ N} \end{array} > \mu = \frac{F_f}{F_N} = \frac{2.5 \text{ N}}{40 \text{ N}} = 0.0625$$

$$F_g = F_N = 120 \text{ N}$$

$$F_f = \mu F_N = (0.0625)(120 \text{ N}) = \underline{7.5 \text{ N}}$$

$$10. \quad \mu = \frac{F_f}{F_N} = \frac{2.5 \text{ N}}{40 \text{ N}} = 0.0625$$

$$\rightarrow \underline{0.063}$$

$$11. \quad 157 \text{ N} - 123 \text{ N} = F_{\text{accel}} = 34 \text{ N}$$

$$F = ma \quad a = \frac{F}{m} = \frac{34 \text{ N}}{5 \text{ kg}} = \underline{6.8 \text{ m/s}^2}$$

12. constant speed so no acceleration

$$300 \text{ N} + 425 \text{ N}$$

$$= \underline{725 \text{ N}}$$

$$13a) \quad F_f = 16.0 \text{ N} \quad \mu = \frac{F_f}{F_N} = \frac{16.0}{45.0} = \underline{\underline{0.35}}$$

$$F_N = 45.0 \text{ N}$$

$$b) \quad F_f = \mu F_N$$

$$= 0.35 (45 + 1.8 \times 9.8)$$

$$= 22.2784 \text{ N}$$

$$\rightarrow \underline{\underline{22.3 \text{ N}}}$$

14. The coefficient of friction, μ , remains the same

15. least effect is how much area contacts (if the normal force remains the same)

$$16. \quad F = k \Delta x$$

$$k = \frac{F}{\Delta x} = \frac{(2 \text{ kg})(9.81 \text{ N/kg})}{20 \text{ cm}} = 0.981 \frac{\text{N}}{\text{cm}}$$

$$F_g = mg = k \Delta x = 0.981 \frac{\text{N}}{\text{cm}} (35 \text{ cm})$$

$$m = \frac{(0.981)(35)}{9.81} = \underline{\underline{3.5 \text{ kg}}} \rightarrow \underline{\underline{4 \text{ kg}}}$$

17. skip the calculating k step:

$$\frac{F}{\Delta x} = \frac{F}{\Delta x}$$

$$\frac{12 \text{ N}}{3 \text{ cm}} = \frac{27 \text{ N}}{x}$$

$$x = \frac{27 \times 3 \text{ cm}}{12} = 6.75 \text{ cm}$$

$$\rightarrow \underline{\underline{6.8 \text{ cm}}}$$

18a) $K = 1.5 = \text{slope} = \frac{1.5 \text{ N}}{1 \text{ cm}}$

(cm) X					
(kg) M	0.1 kg	0.2 kg	0.4 kg	0.5 kg	1 kg
(N) F_g	0.981	1.962	3.924	4.905	9.81

b) $300 \text{ g} \rightarrow (0.3 \text{ kg}) \left(\frac{9.81 \text{ N}}{\text{kg}} \right) = 2.943 \text{ N}$

graph $\rightarrow \sim \frac{2 \text{ cm}}{\text{stretch}}$

c) $1200 \text{ g} \rightarrow (1.2 \text{ kg}) \left(\frac{9.81 \text{ N}}{\text{kg}} \right) = 11.772 \text{ N}$

graph $\rightarrow \sim \frac{9 \text{ cm}}{\text{stretch}}$
