

what is schizophrenia?

A psychosis disorder that affects ones
everyday life:

- how they think

- socialize

- act

- even causes them to lose track of
reality.

- feeling alone and withdrawn from
family members

- known to have no treatment since it
is within the cerebral cortex part of
the brain.

- also known to people as having
multiple personalities within ones
mind.

- it is all based on the mind losign
track of reality.
