

SCHIZOPHRENIA

by aaliyah

what is schizophrenia?

A psychosis disorder that affects ones
everyday life:

- how they think

- socialize

- act

- even causes them to lose track of
reality.

- feeling alone and withdrawn from
family members

- known to have no treatment since it
is within the cerebral cortex part of
the brain.

- also known to people as having
multiple personalities within ones
mind.

- it is all based on the mind losign
track of reality.

common symptoms include:

- hallucinations
- delusions

both conducted from the same space within the brain. While some are more public and even aggressive:

- losing track of words and not being able to conduct a proper conversation.
- Being indiseive or making irrational decitions.
- forgetting this said or done to them.
- losing feelings and other senses.
- moving slowly/ being tired or too hyper active.

SOME TREATMENTS CAN INCLUDE:

- MEDICATIONS
(ANTIPSYCHOTICS)
- REHAB- FOCUSING ON
SOMETHING OTHER THAN
THEIR THOUGHTS.
- FAMILY THERAPY
- TONS OF SUPPORT AND HELP
WHEN IT BECOMES TOO MUCH
PRESSURE FOR ONE TO HANDLE
THEY SEEK HELP IN DRUGS
AND/OR ELECTROCONVULSIVE
THERAPY

THEY CAN BEGIN TO HAVE
UNCONTROLLED SEIZURES. (IT
SOUNDS BAD BUT IT SENDS
NEUROTRANSMITTERS INTO THE
BRAIN
