

## **Asexual Reproduction Cartoon**

You are challenged to create cartoon strips for each of the 5 methods of asexual reproduction. This means that you will have 5 different cartoon strips, one for each method. In these cartoon strips, you will need to use pictures and text bubbles to explain each of the processes. **You will need to have a minimum of two cartoon boxes for each cartoon strip.** Keep in mind, that often a picture is easier to remember than a bunch of writing, so try to explain the processes as best as you can visually.

You will have one class period to work on this assignment. It is expected that the cartoon boxes will be drawn using a ruler and the pictures will be coloured. Please label each of the cartoon strips as to what method of asexual reproduction they are explaining.

Be creative in how you represent the following:

1. Fission
2. Budding
3. Cloning
4. Spores
5. Grafting

You will be assessed on the following:

- creativity
- how well your cartoons explain the five processes
- colour/neatness
- 
-
