**Operations with positive and negative numbers**

**Multiplying and Dividing positive and negative numbers:**

- If the signs are the same (both positive or both negative) the answer will be positive.
- If the signs are different (one positive and one negative), the answer will be negative.

Subtracting a negative number	$2 - (-8) = 10$	
Subtracting a positive number	$7 - 4 = 3$

$20. (4.5) + 8.1 - 7.6 - (-9.2) + 6.2 - 4.2 + (8.9) - 2.9 =$

**More Practice** – the more you practice mental math, the better you will get and the faster you will get without having to resort to using your calculator.

- Roll several dice and add, subtract, or multiply the values without using a calculator.
- Using a deck of cards, flip up two or more cards and add or multiply the values together. For an extra challenge, let the black cards be positive numbers and the red cards be negative. You can also flip them into fractions to add, subtract, multiply or divide.
