

Math 9 – Core Competencies Reflection

Name: Iu

Consider the following areas of student growth

Choose an area of growth that is a strength for you and that you have shown evidence of in math class. Write a paragraph to explain and reflect on this growth.

Personal awareness and responsibility is a strength for me. I have Personal awareness in math, when I do a certain type of question in the work book, I am aware of what I am capable of doing and what I'm not capable of doing. So if I know I'm not capable of doing a certain question, I won't just stress out about, I would ask a teacher or student for help, instead of me stressing out about that certain question. I also have responsibility, I always make sure to finish my homework on time. I make sure to do my responsibility's first and I make sure to study for a test at least 3 days before. So my strength is Personal awareness and responsibility.

Chose an area that you feel you need to further develop your skills in terms of math class. Write a reflection to explain how you plan to grow in this area.

I think I have to develop on communication. I think I have gotten better at communicating than the last 2 months but I think I still have to work on it. I tend to like to work on things by myself, I work better when I am working alone, so I tend to not talk/ communicate with the people around me. I would develop on my communication skills by, not blocking out other people from trying to talk to me, and not working on everything by myself. I will try my best to ask questions when I have questions and I will try to work on communicating with others.
